

KING ROCKS WIND FARM ACCOMMODATION, CAMP OPERATIONS WATER & WASTEWATER TREATMENT

Centurion is supporting Synergy's King Rocks Wind Farm with a 189-room accommodation village and a custom water and wastewater treatment plant. Delivered through BBB Remote Site Services and Centurion Water & Wastewater Solutions (CWWS), the project combines comfort, quality, and compliance for remote conditions.

OVERVIEW

Located near Hyden in Western Australia's Wheatbelt, the wind farm will feature 17 turbines generating up to 105 megawatts of renewable energy. While construction of the wind farm is set to begin in the coming months, work on the accommodation village is already underway.

WHAT CENTURION IS DELIVERING

Centurion is delivering two critical services to support the success of the King Rocks Wind Farm:

Accommodation and Camp Operations

- Delivered by BBB Remote Site Services
- Design, manufacture and construction of a 189-room accommodation village
- Camp management, catering, cleaning and hospitality

Water and Wastewater Treatment

- Delivered by Centurion Water & Wastewater Solutions
- Custom-designed water and wastewater treatment plant
- Built for reliability, compliance and minimal operator input
- Sized and specified to suit the camp's needs and the local environment

WHY THIS PROJECT STANDS OUT

Two key services, one accountable partner

This project demonstrates the benefits of working with a provider who can deliver more than just one part of the solution. Centurion is delivering both accommodation and camp management services, plus water and wastewater treatment, reducing risk and complexity for the client.

A camp designed for comfort and well-being

The accommodation village has been designed to feel more like a home than a remote worksite – safe, comfortable and welcoming. Alongside spacious three-bedroom units, quality finishes and a layout that reflects the local setting, the experience is elevated further by BBB's gold-star catering, with high-quality meals prepared by chefs who bring personality and care to all their meals.

**Strong local community focus**

We're committed to creating long-term value for the Hyden community. That means employing and upskilling local workers and sourcing supplies locally wherever possible. We are also appointing a Community Engagement & Wellness Officer to ensure we contribute in meaningful ways, based on what the community values most.

Built on certified systems

BBB Remote Site Services is certified to ISO 9001, 45001 and 14001 standards, covering quality, safety and environmental management. This gives our clients confidence in what we do from how we build and manage camps to how we care for the people and the environment.
